SUBJECT INDEX

to Volume 117, September–December 1987

Acetylcholinesterase, locus of *Drosophila melanogaster*, molecular and recombinational mapping, 487
Agouti locus
  Emv-15 and, allelic variation, mouse chromosome *2*, 85
  genetic organization, mouse, 93
Alcohol dehydrogenase
  gene region, nucleotide sequence, *Drosophila pseudoobscura*, 61
  locus in yeast, conditional overdominance, 421
  polymorphism, physiological significance, Drosophila larvae, 75
  restriction endonuclease mapping, cladistic analysis of phenotypes, Drosophila, 297
Allele
  correlation structure, Gainj- and Kalam-speaking people, 273
  Emv-15 and *agouti* locus, mouse chromosome *2*, 85
  estimation of number, natural population, sampling method, 795
  gametic disequilibrium measures, 331
  partial inbreeding of finite populations, 353
  Spm-dependent a-m2, genetic and molecular analysis, maize *a* locus, 117
  two-locus models, mean phenotype, monotonic change, 583
Allozyme, genetic diversity
  Dictyostelium discoideum, 213
  linkage disequilibrium, *Drosophila melanogaster*, 513
  natural populations, *Drosophila melanogaster*, 255
A locus, maize, *Spm-dependent a-m2* alleles, analysis, 117
Amino acids, interactions, *GCN4* regulators, yeast cell cycle, 409
Anthocyanin, cloning of mutable *bz2* maize allele, transposon tagging, differential hybridization, 771
Assays
  chromosome *X* dosage compensation
    genetic analysis, *Caenorhabditis elegans*, 25
    lin-14 phenotypic analysis, *Caenorhabditis elegans*, 657
  fusion analysis, *URA3* gene, yeast, 5
  nucleotide differences, sample, single subpopulation, 149
Auxotrophy, gene recombination, linked segregation, *Escherichia coli*, 1

Bacillus subtilis spo, genetic analysis of mutations, Tn*917*-mediated insertional mutagenesis, 603
Bacteriophage, P22 tailspike nonsense mutants, 157
Bacteriophage lambda, translational polarity, mutation, initiator AUG codon, 173
Bombyx mori, selective recombination system, 521
Broad bean, variability in ribosomal RNA genes, heritability, 285

Caenorhabditis elegans, 25, 467, 657
Cell cycle, yeast, interactions, *GCN4* regulators, 409
Central nervous system, distribution of *Scr* gene products, *Drosophila melanogaster*, 51
Centromeres, meiotic and mitotic function, mutational analysis, yeast, 203
Chironomus pallidivittatus, evolution, Balbiani ring gene, 43
Chloroplasts, maize genome, restriction site variation, 139
Chromosome
  fragile *X*, inheritance and expression, mental retardation, 587
  linkage group conservation, *Drosophila melanogaster*, 233
  meiotic and mitotic centromere function, mutational analysis, yeast, 203
  selective recombination system, *Bombyx mori*, 521
Chromosome *2*
  Emv-15 and *agouti* locus, allelic variation, mouse, 85
  genetic organization, *agouti* locus, mouse, 93
Chromosome *X*, dosage compensation
  genetic analysis, *Caenorhabditis elegans*, 25
  lin-14 phenotypic analysis, *Caenorhabditis elegans*, 657
Ciliate, *Tetrahymena thermophila*, nucleo-cytoplasmic interaction, 13
Cladistic analysis, phenotypic associations, restriction endonuclease mapping, Drosophila, 297
Codon, AUG, translational polarity, bacteriophage lambda, 173
Cryptic species, *Dictyostelium discoideum*, genetic diversity, allozyme electrophoresis, 213
Cytopathology, new non-Mendelian genetic element, yeast, 399
Cytoplasm, *Tetrahymena thermophila*, nucleo-cytoplasmic interaction, 13

Dictyostelium discoideum, genetic diversity, allozyme electrophoresis, 213
Dipeptidase-A, variation and viability, *Drosophila melanogaster*, 503
Disequilibrium
  evolution of modifier genes, 559
  gametic, measurement, 331
DNA
  base pair mismatch, heterology repair, *Escherichia coli*, 381
  evolution of repeat units, Balbiani ring gene, *Chi-*

ronomus pallidivittatus, 43
foldback clone, genomic organization, *Tetrahymena thermophilia*, 451
methylation, transposition of *Ac* from *P* locus, maize, 109
mitochondrial, *Drosophila mauritiana*, 687
modification, novel P22 prophage, *Salmonella typhimurium*, 367
noncoding sequences, polymorphism, wild and laboratory mice, 101
Dominance, pleiotropy, metabolic structure, 319
Dosage compensation
daughterless and *Sex-lethal* mutations, *Drosophila melanogaster*, 477
X-chromosome, genetic analysis, *Caenorhabditis elegans*, 25
Drosophila mauritiana, 687
Drosophila melanogaster, 51, 75, 221, 233, 245, 255, 297, 477, 487, 503, 513, 671, 697, 711, 727, 739, 745
Drosophila pseudoobscura, 61, 711
Drosophila simulans, 75, 697
Duplication: *see* Gene
Dysgenesis, hybrid, nonautonomous *P* elements, *Drosophila melanogaster*, 671

Embryogenesis, dosage compensation, *Drosophila melanogaster*, 477
Emv-15 locus, *agouti* locus and, allelic variation, mouse chromosome 2, 85
Endosperm, maize, size factors, 309
Environment, natural populations, genetic structure, *Drosophila melanogaster*, 245
Enzyme: *see also* specific type
dipeptidase activity variation, viability, larval *Drosophila melanogaster*, 503
genetic diversity, linkage disequilibrium, *Drosophila melanogaster*, 513
Escherichia coli, 1, 5, 381
Evolution
Adh gene region, nucleotide sequence, *Drosophila pseudoobscura*, 61
conserved arrangement of nested genes, *Gart* locus, *Drosophila melanogaster*, 711
linkage group conservation, *Drosophila melanogaster*, 233
maize chloroplast genome, restriction site variation, 139
modifier genes, 559
repeat units, Balbiani ring gene, *Chironomus pallidivittatus*, 43
sequence-dependent gene conversion, divergence, 543

Fisher's theorem, two-locus models, mean phenotype, monotonic change, 583
Fixation indices, higher-order gene, definition and estimation, 783
Fusion, analysis, *URA3* gene, yeast, 5

Gene
Adh, nucleotide sequence, *Drosophila pseudoobscura*, 61
Balbiani ring, evolution of repeat units, *Chironomus pallidivittatus*, 43
λ *cI*, translational polarity, bacteriophage lambda, 173
conversion
intrachromosomal recombination, yeast, 633
molecular nature of mutation, mouse cells, 759
pilus variation, *Neisseria gonorrhoeae*, 391
sequence-dependence, divergence, 543
dpy, chromosome *X* dosage compensation, *Caenorhabditis elegans*, 657
duplication
metallothionein, *Drosophila melanogaster*, 739
mutations, yeast, 645
sequence-dependent gene conversion, divergence, 543
fixation indices, higher-order, definition and estimation, 783
frequencies, autocorrelation, isolation by distance, 777
GCN4, positive and negative regulators, yeast cell cycle, 409
lin-14, chromosome *X* dosage compensation, *Caenorhabditis elegans*, 657
modifier, evolution, 559
nested, *Gart* locus, *Drosophila melanogaster*, 711
nodulation, extended region, *Rhizobium meliloti*, 191
PUT3, proline utilization pathway, yeast, 429
physiology, alcohol dehydrogenase polymorphism, Drosophila larvae, 75
RNA, related functions, yeast, 619
SerH, *Tetrahymena thermophila*, nucleo-cytoplasmic interaction, 13
Sex combs reduced, distribution, *Drosophila melanogaster*, 51
Sex-lethal, *P* element mobilization, *Drosophila melanogaster*, 221
URA3, protein fusions, yeast, 5
X-chromosome dosage compensation, genetic analysis, *Caenorhabditis elegans*, 25
Genetics
allelic correlation structure, Gainj- and Kalam-speaking people, 273
analysis of surface antigenic differences, varieties, *Caenorhabditis elegans*, 487
diversity, allozyme electrophoresis, *Dictyostelium discoideum*, 213
gene recombination, linked segregation, 1
in-bred mouse lines, The Jackson Laboratory, 155
quantitative, 601
cladistic analysis of phenotypes, Drosophila, 297
Genetic structure, natural populations, *Drosophila me-*

lanogaster and *D. simulans*, 697
Genome, maize chloroplast, restriction site variation, 139
Germ cells, mitochondrial genetics, heteroplasmy, *Drosophila mauritiana*, 687

H-2 complex, noncoding DNA sequences, polymorphism, wild and laboratory mice, 101
Heritability, morphological characters, natural populations, *Drosophila melanogaster*, 727
Herpes simplex virus, molecular nature of mutation, intrachromosomal gene conversion, mouse cells, 759
Heteroplasmy, mitochondrial genetics, *Drosophila mauritiana*, 687
Heterozygosity, genic variation, natural populations, *Drosophila melanogaster*, 255
Hybridization
  cloning of mutable *bz2* maize allele, transposon tagging, 771
  distribution, *Sex combs reduced* gene products, *Drosophila melanogaster*, 51
3-Hydroxy-3-methylglutaryl coenzyme A reductase, identifying mutations, duplicated functions, yeast, 645

Introns, conserved arrangement of nested genes, *Gart* locus, *Drosophila melanogaster*, 711

Linkage
  directional selection, variation, finite populations, 573
  disequilibrium, genetic diversity, *Drosophila melanogaster*, 513
  evolution of modifier genes, 559
  groups, conservation, *Drosophila melanogaster*, 233
  Pim-1 oncogene, *t* haplotype variation, mouse, 533
Lysogens, novel P22 prophage, *Salmonella typhimurium*, 367

Macronucleus, *Tetrahymena thermophila*, nucleo-cytoplasmic interaction, 13
Maize
  a locus, *Spm-dependent a-m2* alleles, analysis, 117
  chloroplast genome, restriction site variation, 139
  cloning of mutable *bz2* allele, transposon tagging, differential hybridization, 771
  endosperm size factors, 309
  mutator line, characterization, 1.7-kb transposeable element, 297
  transposition of *Ac* from *P* locus, unreplicated chromosomal sites, 109
Mapping
  Pim-1 oncogene, *t* haplotype variation, mouse, 533
  restriction endonuclease, cladistic analysis of phenotypes, Drosophila, 297
Mating, genetic instability, *Tetrahymena pigmentosa*, 437
Meiosis, centromere function, mutational analysis, yeast, 203
Mental retardation, inheritance and expression, human fragile-*X* syndrome, 587
Metallothionein, gene duplications, natural populations, *Drosophila melanogaster*, 739
Methodology, allelic corelation structure, Gainj- and Kalam-speaking people, 273
Micronucleus, foldback DNA clone, genomic organization, *Tetrahymena thermophilia*, 451
Migration, nucleotide differences, sample, single subpopulation, 149
Mitosis, centromere function, mutational analysis, yeast, 203
Monoclonal antibodies, genetic diversity, allozyme electrophoresis, *Dictyostelium discoideum*, 213
Mouse
  agouti region, genetic organization, 93
  Emv-15 and *agouti* locus, allelic variation, 85
  in-bred lines, The Jackson Laboratory, 155
  molecular nature of mutation, efficiency, intrachromosomal gene conversion, 759
  Pim-1, linkage, variation among *t* haplotypes, 533
  wild and laboratory, polymorphism, noncoding DNA sequences, 101
Mu element, 1.7-kb transposeable element, characterization, mutator line of maize, 297
Muller's ratchet, directional selection, variation, finite populations, 573
Mutants
  chromosome *X* dosage compensation, *lin-14* phenotypic anaysis, *Caenorhabditis elegans*, 657
  dominance, pleiotropy, metabolic structure, 319
Mutations
  daughterless and *Sex-lethal*, dosage compensation, *Drosophila melanogaster*, 477
  directional selection, variation, finite populations, 573
  duplicated functions, yeast, 645
  fragile-*X*, inheritance and expression, mental retardation, 587
  genetic analysis of *Bacillus subtilis spo*, Tn*917*-mediated insertional mutagenesis, 603
  molecular and recombinational mapping, *Ace* locus, *Drosophila melanogaster*, 487
  molecular nature, intrachromosomal gene conversion, mouse cells, 759
  nonautonomous *P* elements, hybrid dysgenesis, *Drosophila melanogaster*, 671
  nonsense, tailspike polypeptide chain, bacteriophage P22, 157
  recA, pilus antigenic variation, *Neisseria gonorrhoeae*, 391
  Tetrahymena thermophila, nucleo-cytoplasmic interaction, 13
  X-chromosome dosage compensation, genetic analysis, *Caenorhabditis elegans*, 25
Mutators

cloning of mutable *bz2* maize allele, transposon tagging, differential hybridization, 771
maize, characterization, 1.7-kb transposeable element, 297

Neisseria gonorrhoeae, effects of *recA* mutations, pilus antigenic variation, 391
Nematodes, *Caenorhabditis elegans*, genetic analysis, surface antigenic differences, 487
New Guinea, Gainj- and Kalam-speaking people, allelic correlation structure, 273
Nodulation, *Rhizobium meliloti*, extended region, 191
Nucleotides
differences, sample, single subpopulation, 149
nodulation genes, extended region, *Rhizobium meliloti*, 191
sequence of *Adh* gene region, *Drosophila psuedoobscura*, 61

Oncogenes, *Pim-1*, variation among *t* haplotypes, mouse, 533
Orotidine-5′-phosphate decarboxylase, fusion analysis, *URA3* gene, yeast, 5
Overdominance, conditional, alcohol dehydrogenase locus, yeast, 421

P element
mobilization, *Sex-lethal* gene, *Drosophila melanogaster*, 221
nonautonomous, hybrid dysgenesis, *Drosophila melanogaster*, 671
somatic effects, pupal lethality, *Drosophila melanogaster*, 745
Phages, P22 novel prophage, *Salmonella typhimurium*, 367
Phenotypes
cladistic analysis, restriction endonuclease mapping, Drosophila, 297
two-locus models, monotonic change, 583
Pilus, antigenic variation, *recA* mutations, *Neisseria gonorrhoeae*, 391
Pleiotropy, dominance, metabolic structure, 319
P locus, transposition of *Ac*, unreplicated chromosomal sites, maize, 109
Polarity, translational, initiator AUG codon, bacteriophage lambda, 173
Polymorphism
alcohol dehydrogenase, physiological significance, Drosophila larvae, 75
genetic diversity, linkage disequilibrium, *Drosophila melanogaster*, 513
noncoding DNA sequences, wild and laboratory mice, 101
surface antigenic differences, genetic analysis, *Caenorhabditis elegans*, 487
Population
allelic correlation structure, Gainj- and Kalam-speaking people, 273
finite, directional selection, variation, 573
natural
genetic structure, *Drosophila melanogaster*, 245
genic variation, *Drosophila melanogaster*, 255
genic variation, *Drosophila melanogaster* and *D. simulans*, 697
heritabiilty of morphological characters, *Drosophila melanogaster*, 727
metallothionein gene duplications, *Drosophila melanogaster*, 739
sampling, 795
single subpopulation, sample, nucleotide differences, 149
theory, partial selfing, 353
Proline, utilization, positive regulation, yeast, 429
Protein
folding, P22 tailspike nonsense mutants, 157
fusions, *URA3* gene, yeast, 5
nodulation genes, extended region, *Rhizobium meliloti*, 191

Recombination
base pair mismatch, heterology repair, *Escherichia coli*, 381
effects of *recA* mutations, pilus antigenic variation, *Neisseria gonorrhoeae*, 391
gene, linked segregations, *Escherichia coli*, 1
intrachromosomal, yeast, 633
mapping of mutations, *Ace* locus, *Drosophila melanogaster*, 487
molecular nature of mutation, intrachromosomal gene conversion, mouse cells, 759
selective system, *Bombyx mori*, 521
Replication, unreplicated chromosomal sites, transposition of *Ac* from *P* locus, maize, 109
Restriction, site variation, maize chloroplast genome, 139
Rhizobium meliloti, extended region, nodulation genes, 191
RNA
conserved arrangement of nested genes, *Gart* locus, *Drosophila melanogaster*, 711
distribution, *Sex combs reduced* gene products, *Drosophilia melanogaster*, 51
double-stranded, new non-Mendelian genetic element, yeast, 399
messenger, *RNA* genes, yeast, 619
nodulation genes, extended region, *Rhizobium meliloti*, 191
ribosomal, heritability and variability, *Vicia faba*, 285

Saccharomyces cerevisiae, 5, 203, 399, 409, 421, 429, 619, 633, 645
Salmonella typhimurium, novel P22 prophage, 367
Sampling, natural populations, 795
Segregation, linked, gene recombination, *Escherichia coli*, 1

Segregation distortion, nonautonomous *P* elements, hybrid dysgenesis, *Drosophila melanogaster*, 671
Selection
directional, variation, finite populations, 573
genic variation, natural populations, *Drosophila melanogaster*, 255
genotype-environment interaction, natural populations, *Drosophila melanogaster*, 245
Selfing, genetic instability, *Tetrahymena pigmentosa*, 437
Sex determination, mobilization of *P* element, *Sex-lethal* gene, *Drosophila melanogaster*, 221
Sickle cells, alcohol dehydrogenase, conditional overdominance, yeast, 421
Slime molds, *Dictyostelium discoideum*, genetic diversity, allozyme electrophoresis, 213
Spatial autocorrelation, gene frequencies, 777
Sporulation, genetic analysis of *Bacillus subtilis spo* mutations, Tn*917*-mediated insertional mutagenesis, 603
Sterility
nonautonomous *P* elements, hybrid dysgenesis, *Drosophila melanogaster*, 671
pupal lethality, somatic effects of *P* element, *Drosophila melanogaster*, 745
Sterols, identifying mutations, duplicated functions, yeast, 645
Suppressors, related functions of *RNA* genes, yeast, 619

t complex, *Pim-1* oncogene, linkage, mouse, 533
Tetrahymena pigmentosa, genetic instability, mating type system, 437
Tetrahymena thermophilia
foldback DNA clone, genomic organization, developmental fate, 451
nucleo-cytoplasmic interaction, 13
Thymidine kinase, molecular nature of mutation, intrachromosomal gene conversion, mouse cells, 759
Tn*917*, insertional mutagenesis, genetic analysis, *Bacillus subtilis spo* mutations, 603
Translocations, endopserm size factors, maize, 309
Transposable element
Ac from *P* locus, unreplicated chromosomal sites, maize, 109
1.7-kb, characterization, mutator line of maize, 297
P element
hybrid dysgenesis, *Drosophila melanogaster*, 671
somatic effects and pupal lethality, *Drosophila melanogaster*, 745
Spm-dependent a-m2 alleles, analysis, maize *a* locus, 117
Transposon
base pair mismatch, heterology repair, *Escherichia coli*, 381
tagging, cloning of mutable *bz2* allele, maize, 771

Viability, dipeptidase activity variation, *Drosophila melanogaster*, 503
Vicia faba, variability in ribosomal RNA genes, heritability, 285

Yeast
conditional overdominance, alcohol dehydrogenase locus, 421
interactions, *GCN4* regulators, 409
intrachromosomal recombination, 633
meiotic and mitotic centromere function, mutational analysis, 203
new non-Mendelian genetic element, cytopathology, 399
positive regulation, proline utilization pathway, 429
protein fusions, *URA3* gene, 5
related functions of *RNA* genes, 619
